To Err Is Human Institute of Medicine,Committee on Quality of Health Care in America,2000-03-01 Experts estimate that as many as 98,000 people die in any given year from medical errors that occur in hospitals. That's more than die from motor vehicle accidents, breast cancer, or AIDS—three causes that receive far more public attention. Indeed, more people die annually from medication errors than from workplace injuries. Add the financial cost to the human tragedy, and medical error easily rises to the top ranks of urgent, widespread public problems. To Err Is Human breaks the silence that has surrounded medical errors and their consequence—but not by pointing fingers at caring health care professionals who make honest mistakes. After all, to err is human. Instead, this book sets forth a national agenda—with state and local implications—for reducing medical errors and improving patient safety through the design of a safer health system. This volume reveals the often startling statistics of medical error and the disparity between the incidence of error and public perception of it, given many patients' expectations that the medical profession always performs perfectly. A careful examination is made of how the surrounding forces of legislation, regulation, and market activity influence the quality of care provided by health care organizations and then looks at their handling of medical mistakes. Using a detailed case study, the

book reviews the current understanding of why these mistakes happen. A key theme is that legitimate liability concerns discourage reporting of errors—which begs the question, How can we learn from our mistakes? Balancing regulatory versus market-based initiatives and public versus private efforts, the Institute of Medicine presents wide-ranging recommendations for improving patient safety, in the areas of leadership, improved data collection and analysis, and development of effective systems at the level of direct patient care. To Err Is Human asserts that the problem is not bad people in health care—it is that good people are working in bad systems that need to be made safer. Comprehensive and straightforward, this book offers a clear prescription for raising the level of patient safety in American health care. It also explains how patients themselves can influence the quality of care that they receive once they check into the hospital. This book will be vitally important to federal, state, and local health policy makers and regulators, health professional licensing officials, hospital administrators, medical educators and students, health caregivers, health journalists, patient advocates—as well as patients themselves. First in a series of publications from the Quality of Health Care in America, a project initiated by the Institute of Medicine

Prescription and over-the-counter drugs help millions of people with devastating diseases and chronic conditions. Maybe It's Your Medications Hedva Barenholtz Levy, 2023-07-25 Adults ages 65+: Your medication could be the reason for your new medical condition; read this eye-opening guide to become an expert on what medications you take! We have a medication problem in America. It is marked not only by excessive use of medications, but by errors in how they are prescribed, monitored, and taken. An estimated nineteen million adults age sixty-five and older take five or more medications daily. These individuals and family caregivers know the frustrations of lengthy medication lists, high drug costs, and frequent questions about the need and value of those medications. All too often, an unrecognized adverse drug effect is mistaken for a new medical condition, or worse, a symptom of getting older. But who stops to question the medications? *Maybe It's Your Medications* tackles these problems by providing information, insider tips, and strategies that empower patients and caregivers to have important conversations about their prescription and nonprescription drugs. This book addresses the questions consumers want to ask about their medications and brings to light other questions they should be asking but may not know how. It is everyone's go-to guide on how to use medications safely on the journey to healthy aging. Dr. Hedva Barenholtz Levy, PharmD, is a geriatric specialist and founder of a unique senior care practice of over 25 years working with patients in their homes. She is an educator and leader in geriatric pharmacy and a dual board-certified specialist. Dr. Levy applies her decades of experience to guide the reader in how to become an active participant on their healthcare team and prevent unintended errors and medication-related problems.
