Improved Non-Steroid Anti-Inflammatory Drugs: COX-2 Enzyme Inhibitors Sir John R. Vane, Jack H. Botting, R.M. Botting, 2012-12-06 In 1971, Vane proposed that the mechanism of action of the aspirin-like drugs was through their inhibition of prostaglandin biosynthesis. Since then, there has been intense interest in the interaction between this diverse group of inhibitors and the enzyme known as cyclooxygenase (COX). It exists in two isoforms, COX-1 and COX-2 (discovered some 5 years ago). Over the last two decades several new drugs have reached the market based on COX-1 enzyme screens. Elucidation of the three-dimensional structure of COX-1 has provided a new understanding for the actions of COX inhibitors. The constitutive isoform of COX, COX-1 has clear physiological functions. Its activation leads, for instance, to the production

of prostacyclin which when released by the endothelium is anti-thrombogenic and anti-atherosclerotic, and in the gastric mucosa is cyto protective. COX-1 also generates prostaglandins in the kidney, where they help to maintain blood flow and promote natriuresis. The inducible isoform, COX-2, was discovered through its activity being increased in a number of cells by pro inflammatory stimuli. A year or so later, COX-2 was identified as a distinct isoform encoded by a different gene from COX-1. COX-2 is induced by inflammatory stimuli and by cytokines in migratory and other cells. Thus the anti-inflammatory actions of non-steroid anti-inflammatory drugs (NSAIDs) may be due to the inhibition of COX-2, whereas the unwanted side-effects such as irritation of the stomach lining and toxic effects on the kidney are due to inhibition of the constitutive enzyme, COX-1.

Supportive Care for the Renal Patient E. Joanna Chambers, Edwina Brown, Michael Germain, 2010-03-18 Supportive Care for the Renal Patient Second Edition provides a comprehensive, evidence-based overview of supportive care for the nephrology patient. An international group of contributors emphasise the continuum of palliative care from the time of diagnosis through to end-of-life care and the issues surrounding withdrawal of dialysis. The book addresses the psychological impact of the disease, the importance of involving the patient in making decisions about their care, ethical considerations, the role of the family and the multidisciplinary team. This new edition includes two new chapters on conservative management of advanced kidney disease (AKD) and dialysis in the very elderly. The chapters covering non pain symptoms, advance care planning, quality of life, psychological and psychiatric consideration and end-of-life care have also be

completely revised to include new evidence and current thinking. This book will be of particular interest to palliative care practitioners; nephrologists, who increasingly need to know more about palliative care; nurse practitioners, dialysis nurses, social workers, dieticians, and psychiatric consultants. ABOUT THE SUPPORTIVE CARE SERIES Supportive care is the multidisciplinary holistic care of patients with chronic and life-limiting illnesses and their families - from the time around diagnosis, through treatments aimed at cure or prolonging life, and into the phase currently acknowledged as palliative care. It involves recognising and caring for the side-effects of active therapies as well as patients' symptoms, co-morbidities, psychological, social and spiritual concerns. It also values the role of family carers and helps them in supporting the patient, as well as attending to their own special needs. Unlike traditional palliative care, which grew from the terminal care of cancer patients, supportive care is not restricted to dying patients nor to cancer. This series covers the support of patients with a variety of long-term conditions, who are currently largely managed by specialist medical teams in hospital and by primary care teams in community settings. Each volume therefore provides a practical guide to the supportive care of patients at all stages of illness. Series Editor: Sam H. Ahmedzai
